**New Product: GB2**

Welker introduces the GB2, a smaller version of its GB3 ground block retract cylinder. Part contact pressure can be adjusted with an inline NPT regulator, producing contact forces as low as 45 lbf. Ideal for thin materials or space constrained grounding applications. Weld field immune cylinder switch is adjustable to sense extend and retract. Class 2 copper adapter is offered with choice of smooth, knurled, or projection swivel head. For video and more info visit <http://www.welkerproducts.com/groundblock.php>

**Sales Spotlight: 3D Printed Demos**

The Welker Sales Team is now equipped with 3D printed models of popular components, such as the LST Part Positioner (shown, with a Coke). The models are half scale, fully functioning, and made with lightweight polymer resin. Popular with customers, the 3D printed models enable hands-on demo of products that are normally too cumbersome for long distance Lunch & Learns.

Welker is also 3D printing small parts for robotic training in plastic, when actual metal parts are not yet available.

## Welker at Fabtech 2017

Welker is exhibiting at Fabtech Expo, November 6-9 in Chicago. The expo is North America's largest metal forming, fabricating, welding and finishing event. New this year is the RMP Retracting Micro Pin. Displays will feature operating shot pins, lockouts, clamps, part positioner/ejector, expanding locating pins, part presentationslide, and more. Smaller components will be available for hands-on demo.

Welker will be in booth B37031, located in the welding area of Hall B, McCormick Place. Sales engineers will be on hand to help visitors learn how to make their welding and assembly processes more efficient and cost effective. Admission is free if you register by Nov 3.

Stop by and say hello!
